ERIK SAMUEL L. BIEN

BSIT Student (4th Year) • Full-Stack Development • Android (Kotlin) • Applied AI & Cloud
Masbate City, Philippines | 0920 243 7737 | eriksamuelbien@gmail.com | github.com/thatguyKire | linkedin.com/in/eriksamuel-bien

CAREER OBJECTIVE

BSIT student who ships tested, security-hardened full-stack and Android applications, backed by foundations in AI and AWS cloud, seeking an internship opportunity to apply software engineering, applied AI, and cloud skills.

EDUCATION

Bachelor of Science in Information Technology (BSIT), 4th Year
Cebu Institute of Technology – University (CIT-U), Cebu City | Expected Graduation: 2027
Relevant Coursework: Data Structures & Algorithms, Software Engineering, Systems Analysis & Design, DBMS, Web & Mobile Development

TECHNICAL PROJECTS

LabaLink — Smart Laundry Booking & Payment Platform (v1.0.0) github.com/thatguyKire/IT342-Bien-Labalink

Solo Developer | IT342 Application Development Project
Environment: *Java, Spring Boot 3.5, PostgreSQL, Flyway, Kotlin (Android), React 19, TypeScript, Tailwind CSS, Stripe, WebSocket*

- Built a complete three-tier system solo — Spring Boot REST + WebSocket API, a native Kotlin Android app for customers (QR-scan to start a machine, Stripe wallet top-up), and a React + TypeScript dashboard for shop attendants.
- Led a v1.0.0 security overhaul guided by a STRIDE threat model: JWT on every endpoint with role and ownership checks, verified Google ID tokens, rate limiting and account lockout, and Android Keystore token encryption.
- Made payments tamper-proof with Stripe Checkout, signed webhooks, idempotent row-locked crediting, and a block on live Stripe keys.
- Wrote 34 backend tests on embedded PostgreSQL, Flyway migrations, a Privacy Policy (Data Privacy Act), and the SRS, SDD, and ADRs.

Seoul-Mate Minimart — Live Menu Website for a Korean Store github.com/thatguyKire/seoul-mate-minimart

Solo Developer | In progress (7 of 11 build steps done), Masbate City
Environment: *React 19, TypeScript, Vite, Supabase (PostgreSQL + RLS, Realtime, Edge Functions), Vitest, pgTAP, GitHub Actions*

- Building a three-language (English, Filipino, Korean) menu site where stock changes reach open pages within seconds.
- Security first: Row Level Security on every table, a staff panel with optional two-factor login and session limits, photos checked by content and stripped of metadata, and a rate-limited contact function.
- 108 unit tests, 109 end-to-end tests with accessibility checks on phone and desktop, and 97 database assertions, all run in CI.

PlayIT — Offline English Phonics App for Grade 1 Learners Capstone Project

Developer | 3-member capstone team (IT411)
Environment: *Kotlin, Jetpack Compose, Clean Architecture + MVVM, Room, Hilt, Vosk (offline speech recognition), Python*

- Co-developing an offline-first Android phonics app (Marungko approach) with on-device speech evaluation for low-end phones.
- Built child-focused accessibility and UX features — sound captions, mouth-shape cues, 64 dp touch targets, non-punitive feedback — and fixed core game logic in the Blend It word-building activity.
- Authored the SRS, SDD, and test document; built a Python release tool that checks every figure against the JUnit results and APK.

InkHive — Real-Time Collaborative Whiteboard github.com/thatguyKire/CSIT327-G4-Collaborative-Whiteboard

Lead Developer & Backend Developer | 3-member team (CSIT327-G4) | formerly COLLABoard
Environment: *Python, Django 5.2, Django Channels, Daphne (ASGI), WebSockets, SQLite/PostgreSQL, JavaScript, Render*

- Led a 3-person team and authored most of the codebase for a live classroom whiteboard: teacher-hosted sessions, QR/code join, per-student draw permissions, chat, file uploads, attendance, and PNG/PDF export.
- Re-architected real-time sync from Supabase to in-process Django Channels WebSockets with presence, late-joiner board state, and server-enforced permissions; deployed to production on Render.
- Hardened it for launch (CSP, brute-force lockout, upload content checks, flood limits); added Terms, a Privacy Policy, data export, account deletion, and a one-click demo mode; 127 tests (29 security).

WORK EXPERIENCE / OJT / INTERNSHIP

No formal work experience yet — actively building practical experience through the projects above.

SKILLS AND COMPETENCIES

Languages: Java, Kotlin, Python, TypeScript/JavaScript, PHP, SQL, HTML/CSS
Backend: Spring Boot, Spring Security (JWT/OAuth2), Django, Django Channels, Supabase Edge Functions, REST APIs, WebSocket (STOMP)
Frontend & Mobile: React 19, TypeScript, Vite, Tailwind CSS, i18n, Android (Kotlin), Jetpack Compose, Room, Hilt
Data, Cloud & AI: PostgreSQL + RLS, SQLite, MySQL, Supabase, Flyway; AWS, Render; Generative AI (Amazon Bedrock), AI/ML Fundamentals
Security & Testing: STRIDE threat models, auth hardening, rate limiting, Data Privacy Act; JUnit, Django tests, Vitest, pgTAP
Tools & Modeling: Git, GitHub Actions CI, Docker, Postman, Stripe API, Android Studio; UML, ERD, SRS/SDD documentation

TRAININGS AND CERTIFICATIONS

- **AWS Academy Graduate — Generative AI Foundations** (12 hours, Oct. 18, 2026) — verify on Credly
- **AWS Academy Graduate — Cloud Foundations** (20 hours, Oct. 15, 2026) — verify on Credly
- **IBM SkillsBuild — AI Fundamentals** (July 19, 2026) — verify on Credly
